

Zincoshine - Auks XXII, A,B,C, and D pages 312-335

BCMA began with their first test with their new propellant. Their rocket exploded on lift off. They believed it was because the powder was packed way to loosely. They decided they needed a bonding agent. They decided on alcohol. They went and bought and drank some too. Homer got home drunk but paid for it with his sickness afterwards.

After they mixed the zinc with alcohol. They were going to test again. This rocket on the other hand flew into the sky. They broke the mile barrier. But, to be able to go higher they needed to make a special nozzle. To do this they needed to find the force of zincoshine. For this they used bathroom scales. They rigged it so they could see the force, but when they did they broke the scale.

After this they launched a rocket on the next Saturday. It was a windy day so they angled their rocket. This rocket launched into town, because their rocket launched into town the company tried to shut them down. The town revolts and begins to rebuild Cape Coalwood. The company tries to stop them, but Homer's dad came and saved the day. He "negotiated" for them.
